

# Oil&Gas-16 in Perm. VSP taking part in Oil&Gas exhibition.

In the period from 11 to 14 October, the 18<sup>th</sup> specialised exhibition of modern technologies and equipment for oil, gas and chemical industry «Oil&Gas. Chemistry» took place in Perm. We are happy with the possibility to take part in an important industry event in one of the priority regions of work for our team.

For the first time this year we participated at the Perm exhibition directly with the VSP stand. Visiting the exhibition as mandatory or joint participation with a partner in Perm - the Ural-Test company - is a format which we have practiced for years.

*Based on a particular focus, a special theme which we have been developing during the year 2016 on the whole - «Intrinsically safe technologies and solutions by MTL in terms of Functional Safety Standards» - we decided that the most complete demonstration of the level of MTL solutions to the customer will be with our direct participation in the exhibition.*

[Brochure «MTL Solutions. Standards of Functional Safety» ...>>](#)

We are glad with the results and are grateful to customers and partners for their attention, for a possibility to present the latest engineering MTL developments for intrinsic safety.

We are glad to note that the organizer of the exhibition in Perm marked VSP stand "For the active promotion and distribution of industrial technologies for process automation".
